

The STEM CELL ENHANCER SAGA

An Exclusive Interview With Nonoy Mendoza

By Tony Garcia, Senior Staff Writer for PinoyGlobal

WASHINGTON, D.C., July 01 (PinoyGlobal) - Noticing an obvious change of attitudes and happier disposition of our Big Boss, Nonoy Mendoza, Editor-Publisher of both PGON and FILIM, he consented to this exclusive interview.

Nonoy has been under medical care for almost twenty-five (25) years. He takes daily the following pills: Plaviz, 75 mg for anti-platelet for heart problems; Allopurinol, 300 mg for gout; Amaryl, 2 mg for diabetes; Coreg, 6.25 mg for blood and heart ailments; Cozaar, 25 mg also for heart; Lasix, 40 mg as water pills; Inspra, 25 mg for high blood; Lipitor, 80 mg for cholesterol; Aspirin, 325 mg also for anti-platelet; and various Vitamins. "I don't usually enumerate or "confess" the medicines I am take daily. But I am allowing this interview with a condition of no-holds bar, with Tony Garcia, my favorite PGON/FILIM staff writer."

On June 9, 2009 (Tuesday), the entire Rosslyn (VA) area had an outage due to strong thunderstorm that occurred around 11:45 p.m. When it happened, Nonoy was engaged in his usual computer tasks. His immediate reaction was to get up and search for a flashlight and called his wife, Aida, for assistance.

Groping in the pitch-dark to open the door of his office door, Nonoy lost his balance, and forcefully fell when trying to reach the door. Off-balanced, he twisted his body and hit an end table bruising his left knee. Trying to get his balance, he hit the edge of a coffee table that could have easily damaged his skull, fortunately when he fell the sec-

ond time, he hit a lamp shade that supported and cushioned his fall. When he hit the sharp edge of the coffee table in his left upper torso, resulted an threatening-looking Hematoma measuring 12-inch long and 4 inches wide causing a deep red and purple-colored ugly-looking bruise.

The following day, Nonoy went to his primary care physician, Dr. Angie Agrawal for checkup. Dr. Agrawal informed Nonoy that he was fortunate there was no major injury. However, Hematoma, could take 4 to 6 weeks to heal and for the skin to revert to its normal color. She diagnosed that it was not life-threatening.

Dr. Rene Alvir, a close personal friend for almost three decades, also confirmed Nonoy's physician's findings, and agreed the bruise will take no less than four (4) weeks to heal.

Earlier in late May, Dr. Alvir visited Nonoy and recommended to take a dietary supplement called Stem Enhance to help supply the natural release of adult stem cells which maybe a factor in estabilizing Nonoy's heart, blood pressure, diabetes, arthritis, gout, sleeping problems, and other ailments. Nonoy followed Dr. Alvir's advise, and in June 2, 2009, after checking with his physicians, Nonoy started with the supplement, taking orally two (2) pills in the morning and at night.

After the June 9 outage episode, Nonoy doubled the dosage of the supplement pills: four in the morning and four at night. What happened after that is quite unbelievable, as Nonoy claimed.

In less than two weeks, Nonoy's 12 x 4 inches bruise (Hematoma) almost disappeared. His outlook at life has completely transformed him in a jolly fellow, easy going and full of life and vigor! His ailments are all practically controlled. He no longer wake up at night due to cramps in both legs and fingers. His diabetes, blood pressures and other ailments seem to be under control.

Nonoy was not fully convinced before with the STEM ENHANCER effect to take immediately until after the June 9 outage incidents. Three days immediately after the TOFA-STEMCELL dinner at Embassy Suite Hotel, Thursday, June 11, 2009, Nonoy became a firm believer. Now, he is not only fully convinced of the traumatic effect of the "WORLD'S FIRST STEM CELL ENHANCER that supports the natural release of adult stem cells which REBUILD, RENEW, REJUVENATE," but joined Dr. Rene Alvir in promoting to spread wellness through the use of the supplemental pill, Stemcell Enhance.

"I am the best example of the effects of StemcellEnhancer. It is not a medication but strictly a dietary supplement. Just like vitamins, as my physicians explained. But the wonder of the pills, as far as my previous health conditions are concerned are

now history," explained Nonoy in this exclusive interview. "I joined the StemTech family not to make money, although one can not help it, but make extra income - - more specially during this time of economic downturn. My idea is to rally the TOFA Past Awardees, numbering around 380, all members of the exclusive and elite "Circle of Leaders", to improve their own wellness condition as well as their immediate relatives, friends, and others - - - more of assisting others to try and use the supplement. The money income part is secondary, but can be developed into a major source of income to many prospects specially, those experiencing the economic downturn syndrome."

Nonoy personally organized and spearheaded the PinoyGlobal STEMTech Team which is very unique in its marketing , sales, and public relations approach.

"I am excited of the PinoyGlobal STEMTech Team which will be recruiting nationwide. Definitely, the Team will be global and will have the full support of the PinoyGlobal Online News (PGON) and the Filipino Image Magazine (FILIM) both global media vehicles, and the PinoyGlobal STEMCELL Team. #
